SUMMARY

Results-driven Android Developer with 5+ years of experience architecting, developing, and delivering production-grade mobile applications using Kotlin and modern Android technologies. Strong expertise in MVVM, Clean Architecture, Jetpack Compose, Coroutines, and real-time communication systems using WebSocket and MQTT. Experienced in building scalable Social Networking and Smart Home Automation applications while driving performance optimization, clean code practices, and high-quality user experiences.

SKILLS

- **Languages:** Kotlin, Java
- **Android:** Jetpack Compose, XML, Android SDK, Jetpack Libraries, Navigation Component, ViewModel, LiveData, Room DB, WorkManager, ConstraintLayout
- **Architecture:** MVVM, Clean Architecture, Modularization, Repository Pattern, SOLID Principles
- **Concurrency:** Coroutines, Flow, StateFlow, SharedFlow, Mutex
- **Dependency Injection:** Dagger, Hilt
- **Networking:** Retrofit, REST APIs, WebSocket, MQTT
- **Media & Streaming:** ExoPlayer, Video Streaming, Media Handling
- **Firebase:** Authentication, Realtime Database, Cloud Messaging, Push Notifications, Analytics
- **Local Storage:** Room Database, DataStore, SharedPreferences
- **Tools:** Git, GitHub, Bitbucket, Gradle, Postman, Android Studio
- **Testing & Debugging:** Unit Testing, Debugging, Crash Analysis
- **Concepts:** OOPs, DSA, Performance Optimization, Memory Management, Multithreading

EXPERIENCE

Vyom System and Solution Pvt Ltd

Senior Android Developer

Joined: Sep 2024 Current Company

- Serving as a core Android developer for a large-scale Home Automation platform, driving architecture decisions, feature development, and production releases.
- Architected scalable Android modules using MVVM, Clean Architecture, and modular development practices, improving maintainability and long-term scalability.
- Developed real-time communication infrastructure using WebSocket, enabling instant device synchronization and live state updates across multiple smart home device categories.
- Designed and implemented offline-first architecture using Room Database, local caching, and synchronization mechanisms to ensure seamless operation during network interruptions.
- Built automation, device management, dashboard, and remote-control modules supporting smart lighting, climate control, media systems, and security devices.
- Collaborated closely with backend and IoT teams to improve communication reliability, reduce synchronization issues, and enhance device responsiveness.
- Investigated and resolved complex production issues including ANRs, memory leaks, crashes, and performance bottlenecks, improving application stability and user experience.
- Led feature implementation from requirements to deployment while maintaining high code quality through clean architecture principles and code reviews.

Netclan Inc.

Android Developer

Joined: Mar 2021 Relieved: May 2024

- Developed and maintained production-scale social networking applications serving thousands of active users across multiple engagement-focused features.
- Led development of major application modules including Notes, Hashtags, Jobs, and community engagement workflows.

- Designed and implemented scalable backend integrations using Retrofit and REST APIs, ensuring reliable and efficient data communication.
- Integrated Firebase Cloud Messaging to deliver real-time notifications, improving user engagement and retention.
- Developed location-based features using Google Maps APIs including user discovery and proximity-based interactions.
- Refactored legacy application components into MVVM architecture, reducing technical debt and improving development velocity.
- Integrated AdMob monetization solutions and contributed to application growth initiatives and user engagement improvements.
- Collaborated closely with product, design, backend, and QA teams in agile development cycles to deliver production-ready features.

PROJECTS

OKAS Pro

Kotlin, MVVM, WebSocket, Room Database, Retrofit, Coroutines

- Designed and developed the Android application architecture from scratch.
- Built scalable real-time communication workflows using WebSocket for live device control and synchronization.
- Implemented MVVM + Clean Architecture to improve maintainability, scalability, and feature isolation.
- Developed automation, device management, authentication, and dynamic control modules for smart home systems.
- Implemented offline-first architecture using Room Database and optimized API handling with Retrofit and Coroutines.
- Worked on production-level debugging, performance optimization, and release management.
- Collaborated with backend and IoT teams for seamless hardware-software integration.
- Play Store Link: [OKAS Pro](#)

Netclan Explorer

Kotlin, Java, Firebase, Google Maps, Retrofit, MVVM

- Developed social networking features with scalable Android architecture and modern development practices.
- Implemented push notifications using Firebase Cloud Messaging.
- Built map-based functionalities using Google Maps APIs.
- Improved app performance and user experience through architecture refactoring and code optimization.
- Collaborated in agile development workflows with cross-functional teams.
- Increased user retention by 15% and boosted average session duration by 2 minutes through feature optimization, engagement workflows, and user experience improvements.
- Improved application startup performance from 10–12 seconds to 2–3 seconds (4x faster) through architecture optimization, lazy loading, and performance tuning. Increased crash-free sessions by 50% through code refactoring, stability improvements, and proactive issue resolution.
- Play Store Link: [Netclan Explorer](#)

EDUCATION

Maharshi Dayanand University

Bachelor of Technology (B.Tech)

Computer Science Engineering

ACHIEVEMENTS

- Awarded **Netclan Star Performer** for outstanding technical contribution and consistent delivery.
- Contributed to production-grade Android applications with **20K+ downloads** and active daily users.
- Built and maintained critical real-time and automation-based Android modules used in production environments.
- Improved application performance, scalability, and maintainability through architecture modernization and optimization.
- Worked extensively on production debugging, issue resolution, and feature delivery in fast-paced development cycles.
